Need improved coolant filtration quality without giving up needed floor space?

The compact foot print of the KF filter manufactured by Knoll America provides the answer. The high efficiency paper band filter takes less space than flat bed filters and requires lower paper consumption. Five different sizes are available to filter coolant from 30 GPM to 160 GPM. For a single machine or machine groups, this is an economical alternative to other types of consumable media filters. High pressure coolant delivery from 150 to 1500 PSI is among the available options.

Knoll America can provide consumable filter paper to your facility at a cost saving. Not only can we provide the proper grade of paper for your machining operations, we can save you money in the quoting process. In addition, we can arrange to have your used filter paper recycled and returned to you as a new product, thus turning contaminated waste into environmentally friendly disposal.

Contact Knoll America at 248-588-1500 or visit our website www.knollamerica.com for additional information on filters, pumps and conveying systems.
